

Portfolio Project – Documentation

How I settled on the look of my website:

- I wanted the site to have a neon look, both in borders and text to give the sense you were looking at a screen of an older machine with simple UI and harsh contrast between the background and text.
- Artstation was a big inspiration for me, both in terms of color scheme and how the navigation is laid out.

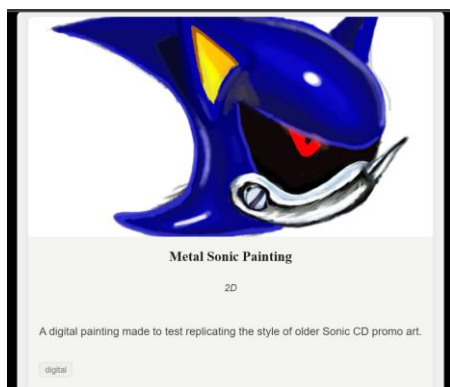

Usability Testing:

Participants:	Task:	Usability Issue:	Solution:
1. Mikey	Navigate to the model section of the 3D Art page.	Got confused by seeing art on the home page and couldn't find 3D page initially.	Replaced art on home page with logos for better clarity.
2. Kate	Navigate to the About Me page.	Struggled to see the link for the About Me page at the bottom of Home.	Included About Me in the navigation to avoid users having to scroll all the way down.

Solution 1: Replacing art with logos.

The home page used to feature large chunks of art carried over from the catalogue page, so to fix the confusion I changed it to feature logos of programs I used instead to improve clarity.

After:

Solution 2: Adding 'About Me' to the navigation bar.

The easiest way to improve accessibility was including the About page with the rest of the pages in the top navigation bar. This made it so the site could be accessed entirely without a mouse. Now, users have more than one option to navigate.
